

## **GROUP 4**

### **CO-1**

#### **AIM:**

Consider the database for a college and design an ER diagram. Write the query for the following.

Create the tables:

Student (sid, sname, sex, dob, dno)

Department (dno, dname)

Faculty (F\_id, fname, designation, salary, dno)

Course (cid, cname, credits, dno)

Register(sid, cid, sem)

Teaching(f\_id, cid, sem)

Hostel(hid, hname, seats,)

Include the necessary constraints NOT NULL, DEFAULT, CHECK, and PRIMARY KEY, UNIQUE.

- (i) Create a database college
- (ii) Use college as the current database
- (iii) Display all the tables in college database
- (iv) Describe the structure of all tables
- (v) Modify the student table to add a new field 'grade'

Consider the database for a college. Write the query for the following.

- a. Insert at least 5 tuples into each table.
- b. List the details of students in the ascending order of date of birth
- c. Display the details of students from computer department
- d. List the faculties in the descending order of salary

- e. Display the total number of students in each department
- f. Display the total number of faculties in each department with salary greater than 25000

### **CODE:**
